MACROS AND VISUAL BASIC (VBA) IN EXCEL

COURSE INFORMATION

Automating repeat actions can save employees immense amounts of time each month. With recorded and coded macros, it becomes possible to automate repeat actions. The aim of this interactive course is to teach delegates how to automate processes by recording or coding macros, as well as basic and intermediate coding techniques in Visual Basic for Applications (VBA). No prior coding experience is required, as the course includes basic to intermediate coding principles in VBA, as well as a host of practical examples.

COURSE CONTENT

Recording Macros

Inserting Buttons

Stepping into the VBA Code

Troubleshooting Macros

Basic to Intermediate VBA

Dynamic Cell References

Automated Text-to-Columns and Advanced Filters

Automated Solver calculations

Macros in advanced financial models

Various Practical Applications

Useful Tools

I found the course very useful, I learned a lot and I am inspired to learn further as I see opportunities to use what I learned. The course is pitched at the right level; we are taught basic to advanced stuff to help our understanding. The training facilitator is very knowledgeable and facilitated very well. The course not only covers just Macros and Visual Basic, but Rona shows you other "tricks" and ways of working that you might not have known of.
