POWER TOOLS, TABLES AND ARRAYS IN EXCEL

COURSE INFORMATION

Excel's Power Tools can efficiently analyse virtually an unlimited amount of data in a greatly reduced time. Previous delegates have reported cutting the time spent on month-end reporting in half by using Power Query and Power Pivot. The aim of this course is to equip delegates to use Excel's Power Tools, table functionalities and array calculations to streamline calculations and applications in their vast datasets and financial models. New dynamic array functions are constantly being added by Excel developers, and this course is updated with the latest in dynamic array functions, bringing you the cutting edge ways to analyse massive datasets in a practical format.

COURSE CONTENT

- Power Query and Power Pivot
- Get and Transform Data
- DAX Formula Language
- Table Tools and Functionalities
- Advanced Pivot Tables
- Dynamic Input Ranges
- Timelines and Slicers
- Text-to-Columns
- Two-variable Data Tables
- Conditional Formatting
- Functions in Array Calculations
- Lookup Functions
- Dynamic Array Functions
- Searchable Drop-down Lists
- Dynamic Data Validation
- Advanced Filters
- Dynamic array Text Functions (such as TEXTJOIN, TEXTSPLIT, etc.)

> I would definitely recommend this course. We do a lot of reporting and we work with big sizes of data. So, there are so many shortcuts, and Power Pivot is also cool. The array where we don't have to drag down formulas is going to save me so much time. There is a bit of everything in the course that you can take back or someone in the team can use. You may not use it now, but you know it can be done.
